

GainGo – Strategic Partnership & Product Overview (Pre-Launch Test Build)

Audience: SEBI-Registered Brokerages, Research Platforms, and Financial Media (Potential **Integration & Dashboard Co-Ownership** Partners)

Purpose: Product walkthrough for evaluation, feedback, and partnership discussions

1. About GainGo

GainGo is a finance-focused desktop browser designed specifically for investors, traders, and market learners in India.

Instead of spreading the investment workflow across multiple tabs, apps, and websites, GainGo brings **learning, research, market tracking, and execution access** into a **single, dedicated financial workspace**.

GainGo is not a trading platform and does not replace any existing brokerage, research, or news product. It acts as a **neutral, investment-first environment** where trusted platforms can coexist and be accessed with clarity and focus.

2. Context & Environment

Today, even the most advanced brokerage and research platforms are accessed through general-purpose browsers. In such environments, financial workflows compete for attention alongside emails, social media, entertainment, shopping, and work tools.

Institutional investors operate within dedicated systems such as Bloomberg terminals, where market information, research, and execution access live inside a focused, purpose-built environment.

Institutional investors operate within dedicated systems such as Bloomberg terminals... GainGo addresses this **environment gap** by providing the retail investor equivalent: a dedicated command center built for high-intent financial workflows.

GainGo addresses this **environment gap** by providing a dedicated, investment-first workspace that allows multiple financial platforms to coexist and perform in the context they were designed for.

What GainGo Is — and Is Not

GainGo is **not designed to replace** a user's existing browser or any brokerage, research, or news platform.

Users can continue to use Chrome, Edge, Safari, or any general-purpose browser for everyday activities such as email, social media, shopping, and entertainment.

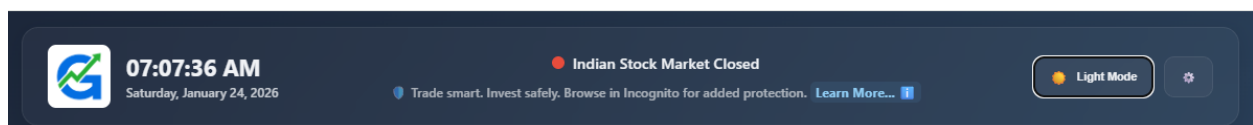

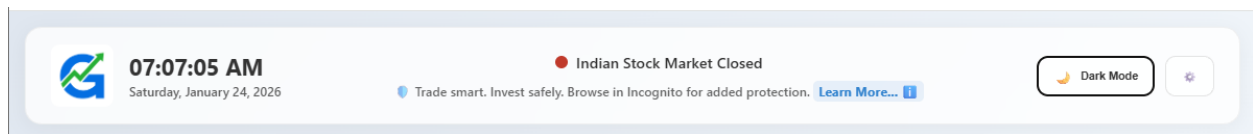

GainGo is intended to **complement** these browsers by serving as a dedicated command center specifically for the investment journey — where learning, research, market awareness, and execution access happen with focus and intent.

Rather than replacing platforms, GainGo **amplifies them** by providing an environment built for financial workflows, enhanced visibility at moments that matter, and additional privacy and security considerations aligned with market usage.

3. Core Browser Experience

3.1 Light & Dark Mode

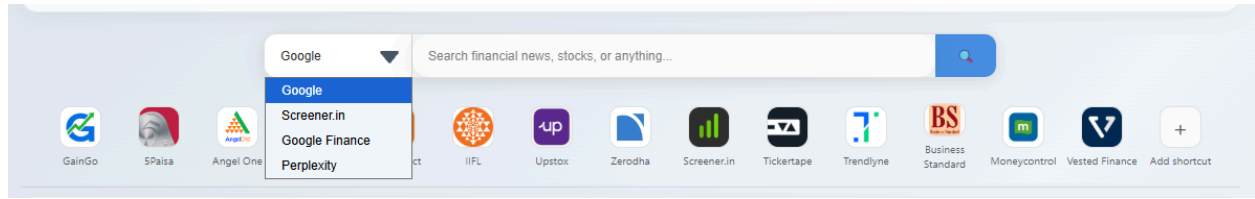

- System-level Light and Dark themes
- Optimized for long market hours and reduced eye strain

3.2 Integrated Search (Multi-Source)

A unified search experience with instant access to:

- Google
- Screener.in
- Google Finance
- Perplexity

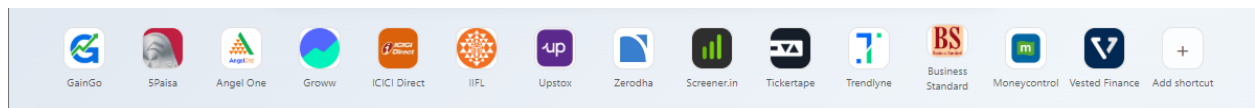

Users can switch between sources seamlessly depending on whether they are doing quick lookups, fundamental research, market checks, or AI-assisted exploration.

4. Speed Dials (Permanent Dashboard Real Estate)

All Speed Dials shown in this build are **for demonstration purposes only**.

Speed Dial placements are treated as permanent real estate inside GainGo's finance-focused browser—not ad inventory. This placement offers **guaranteed, persistent visibility** to a high-intent audience, resulting in superior ROI and lower CAC compared to temporary ad impressions.

Default Speed Dials are reserved for **Founding Partners** to guarantee continuous presence at the moment of financial intent. However, users are free to add additional Speed Dials for any platforms of their choice, allowing them to personalize the dashboard alongside the default entries.

Pre-Launch Availability

We are offering **limited, exclusive Founding Partner slots**. This is a strategic opportunity to lock in **first-mover advantage** and favorable pricing before the platform scales:

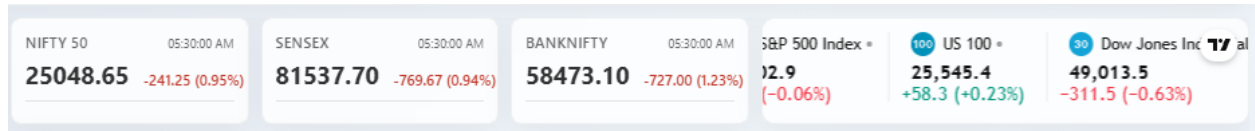

- **3 slots** for SEBI-registered brokerage platforms
- **2 slots** for stock screening or analysis platforms
- **1 slot** for a stock market news or research publisher

Commercial and integration details can be discussed separately with interested partners.

5. Market Indices (Demo Data)

The dashboard displays key market indices, including:

- NIFTY 50
- Sensex
- Bank Nifty
- Select US indices – Powered by *TradingView*

Data shown in this build may have a **slight delay** and is used only to demonstrate layout, hierarchy, and information placement.

Regulatory Disclaimer

GainGo does not provide investment advice, recommendations, or execution services.

All market data, tools, and information are provided strictly for **educational and informational purposes**.

Any investment decisions or transactions are made solely at the user's discretion on **third-party platforms**.

6. My Watchlist (Current Build)

For demo purposes, GainGo currently supports watchlist tracking for **NIFTY Top 250 stocks only**. This scope is used to demonstrate the watchlist experience and related research workflows.

Each stock in the watchlist provides quick access to:

- Google Finance
- Fundamental Data
- Technical Analysis
- SWOT Analysis

The watchlist feature is under active iteration. Future versions of GainGo may introduce limits on the number of stocks a user can add to the watchlist, based on performance, usability, and product design considerations.

7. Market Widgets (Current Scope)

The following widgets are included in the current build to demonstrate the market command center concept:

- **Market Breadth** – Sample data shown. Interested platforms may approach GainGo to showcase their market breadth widgets in future iterations.
- **Sector Performance** – Sample data shown. Interested platforms may approach GainGo to showcase their sector performance widgets in future iterations.
- **Market Movers** – Powered by *TradingView*
- **Economic Calendar** – Powered by *TradingView*

These widgets represent configurable dashboard components designed to support **Partner-Powered Integrations**. This grants partners **co-ownership of dashboard real estate**, allowing them to engage users multiple times per day with branded data (e.g., "Powered by [Partner Name]"), which builds brand trust and increases recall.

8. Quick Actions

Quick Actions provide single-click access to commonly used market workflows:

- **Stock Screener** – Powered by *TradingView*
- Trading Platforms
- Portfolio Platforms
- Market Research Tools
- Options Chain

My Notes

✚ Research Checklist — Before Every Trade

- ✓ Check market trend direction
- ✓ Review stock fundamentals (P/E, Debt/Equity)
- ✓ Run Technical Analysis — RSI below 40?
- ✓ Read SWOT — any red flags?
- ✓ Check Corporate Actions — upcoming results?
- ✓ Cross-check latest market news
- ✓ Only then — open your trading platform

Rule: Research first. Trade second. Always.

[Save Note](#)

11. My Notes

GainGo includes built-in sticky notes that users can use for:

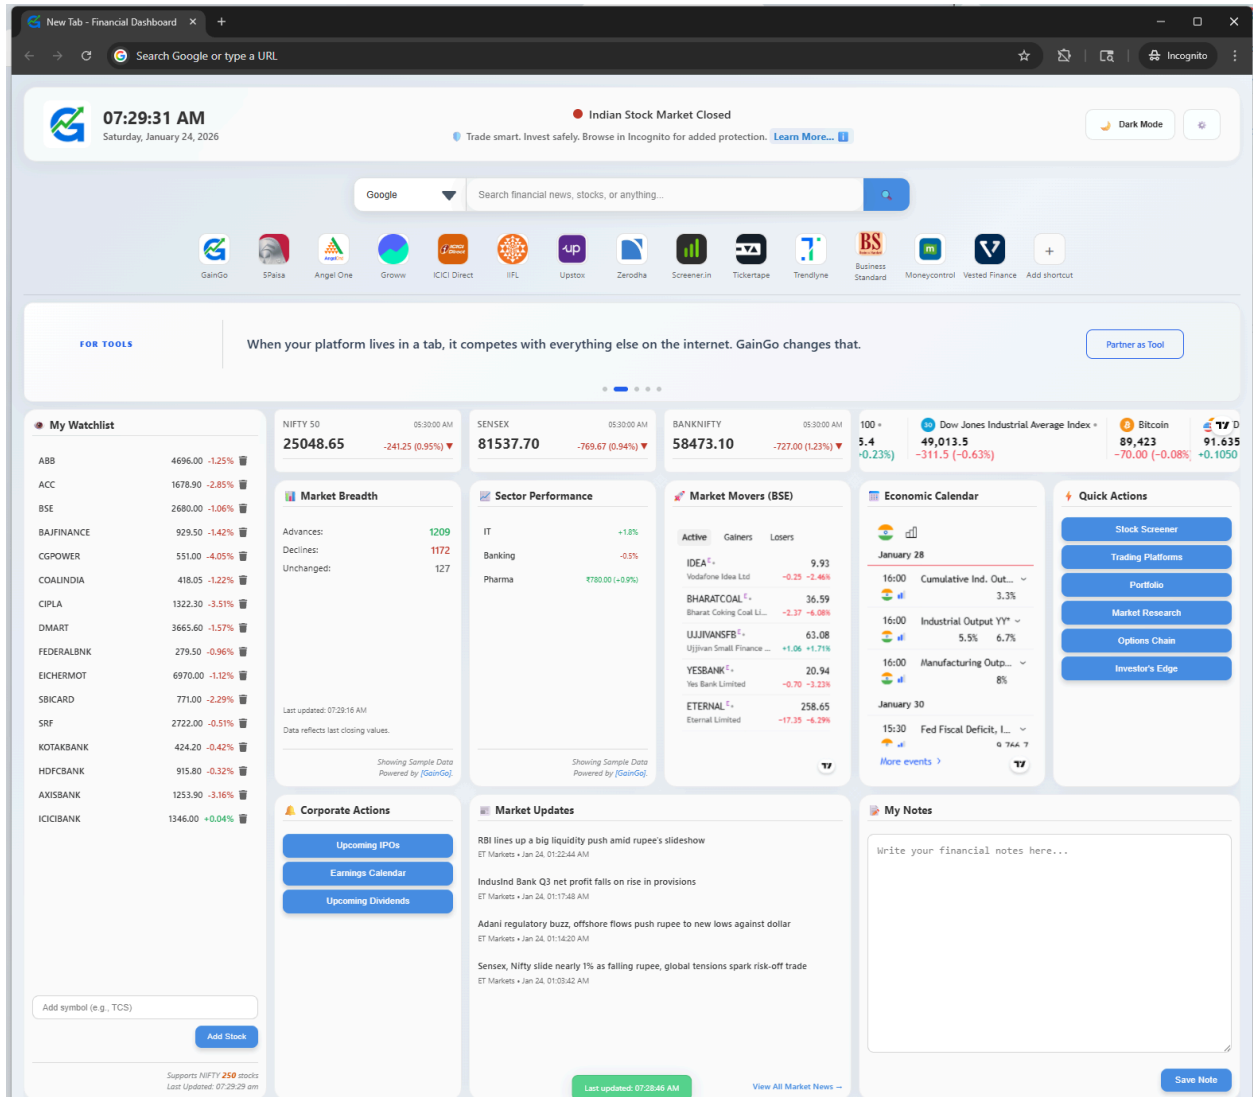

- Research thoughts
- Trade planning
- Learning notes

All notes remain stored locally within the browser.

12. Incognito Mode with Command Center

Unlike traditional browsers, Incognito mode in GainGo retains the financial command center.

This allows users to maintain privacy while continuing to access market tools, research platforms, and learning resources without session persistence.

13. Privacy & Security Focus

GainGo follows a **privacy-first, local-first architecture**, including:

- Reduced unnecessary background communication
- Local storage of user preferences
- Separation between general browsing and financial workflows

- GainGo does not centrally profile users or collect behavioral investment data

 **Your Financial Command Center** ✕

GainGo is a purpose-built browser hardened for the world of trading and finance.
Explore how we protect your assets and your privacy.

Core Protections

Best Practices

Browser Isolation

 **Protocol-Level Tracking Block**
Internal telemetry and known tracking domains are blocked at the network level using a custom protocol handler. All third-party cookies are blocked by default to prevent cross-site tracking.

 **Transparent & Quiet Browse**
Full URLs are always displayed in the address bar and on hover to protect you from phishing. Unnecessary background network activity, like the intranet redirect detector, is disabled to reduce network noise.

 **IP Address Protection**
The WebRTC policy is hardened by default to prevent your local and public IP address from being exposed. Connections are restricted to proxied routes, and internal logging is disabled.

 **Configuration Stability**
The entire framework for fetching remote "field trials" and A/B test variations is disabled. Your browser's features and UI will remain consistent, free from silent, unannounced changes from upstream providers.

 **Fingerprinting Resistance**
APIs commonly used for fingerprinting, such as the Battery Status service, are disabled. This, along with Do Not Track being enabled by default, makes your browser profile significantly more generic and harder to track.

 **Privacy-First Defaults**
Silent data-sharing features like crash reporting, host-specific detection, and automatic secure DNS are disabled by default, ensuring no unexpected connections are made to service providers.

Disclaimer: GainGo does not provide investment advice or buy/sell recommendations. All market data, tools, and information are provided for informational and educational purposes only. Investment decisions and transactions are made solely at the user's discretion on third-party platforms.

Got It, Let's Get Started

Your Financial Command Center ×

GainGo is a purpose-built browser hardened for the world of trading and finance.

Core Protections

Best Practices

Browser Isolation

Inspect Links Before Clicking

Especially in emails or on social media. Hover to preview the URL. GainGo's clear URL policy will help you spot fakes.

Use a Password Manager

Generate and store strong, unique passwords for every financial site. Never reuse passwords between your trading accounts and social media.

Be Skeptical of Extensions

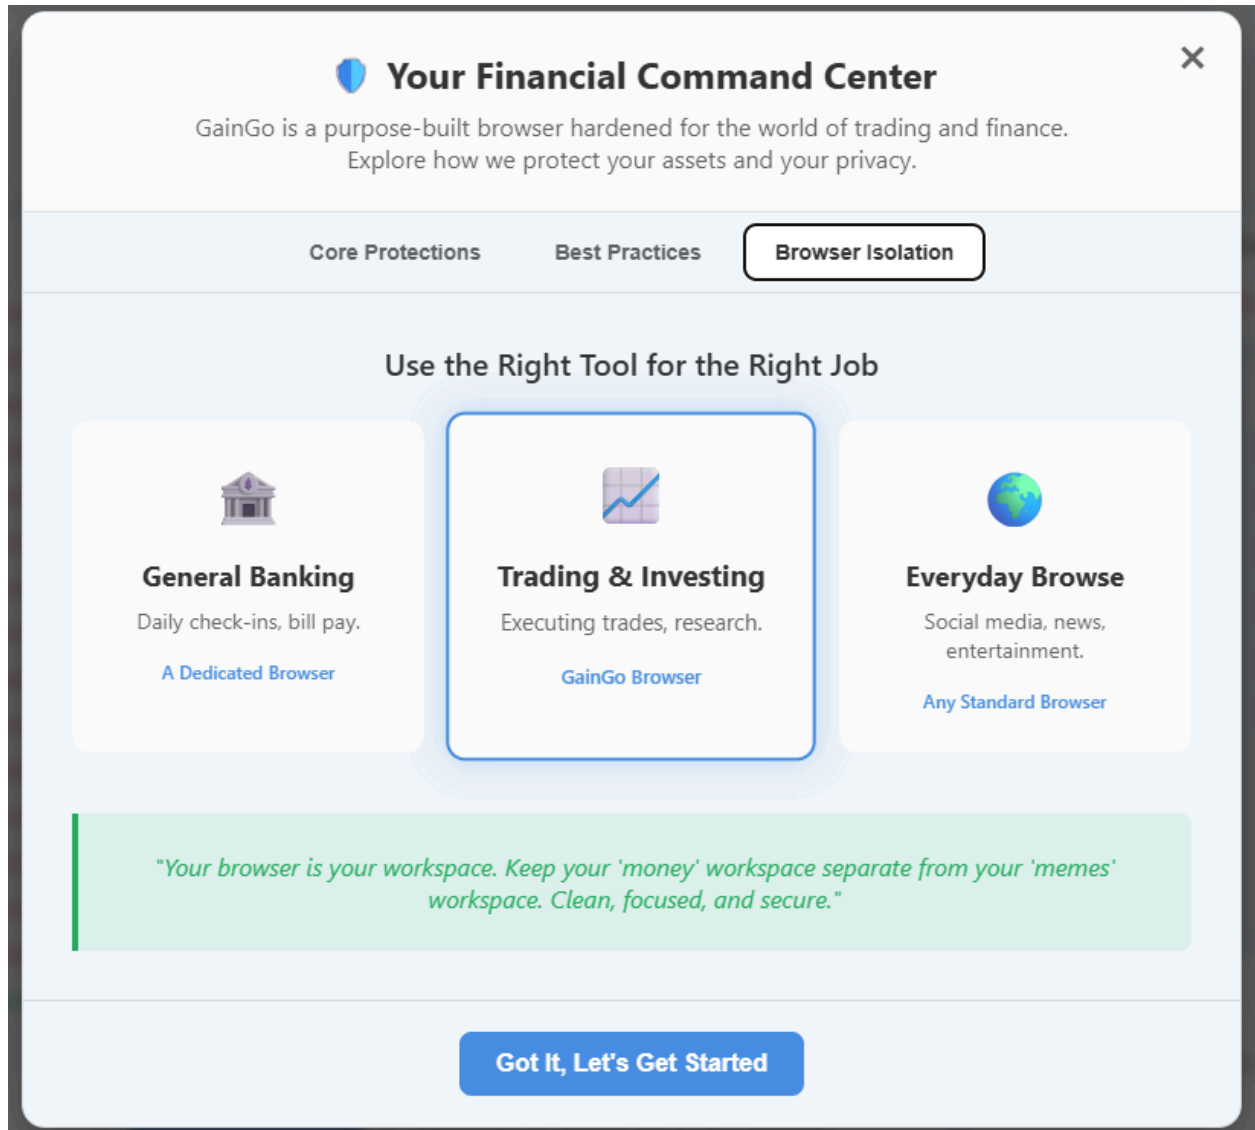

For financial activities, avoid browser extensions. Each one is a potential security risk. GainGo is secure out-of-the-box.

Use Incognito Wisely

Incognito is great for one-time logins as it doesn't save history or cookies locally. It does not make you anonymous online.

Got It, Let's Get Started

14. Platform & Build Information (Demo Disclosure)

The current demo build of GainGo is based on **Chromium version 145**.

This version is used strictly for demonstration and evaluation purposes. Upon public release, GainGo will be built on the **latest stable Chromium version** available at that time, in line with security, stability, and performance best practices.

15. Why Environment Matters (For Platforms & Investors)

Even the strongest stock market platforms today operate inside general-purpose browsers. In these environments, financial decision-making competes with emails, social media, entertainment, shopping, and notifications.

When markets move fast, investors aren't evaluating tools — they are searching for tabs. World-class platforms are reduced to tiny favicons, buried among distractions, discovered too late, or not at all.

This is not a platform problem. It's an environment problem.

Why Most Indians Never Start Investing

India has over 140 crore people, yet only a small fraction actively invest.

The gap isn't intent or intelligence — it's confusion. When people decide to learn about investing, they encounter scattered platforms, unfamiliar jargon, unverified sources, and dozens of open tabs, each demanding attention.

Faced with this chaos, most people delay starting. Those who do often learn through costly mistakes. The market doesn't lose participants because of lack of opportunity — it loses them because the entry environment is overwhelming.

GainGo's Role

GainGo exists to solve both sides of this problem.

For platforms, it offers a dedicated environment where financial tools are visible, accessible, and used in moments that matter.

For users, it provides a calmer, structured starting point — where learning, research, news, and execution access live together, without distraction.

16. Feedback & Partnership Discussions

This pre-launch build is being shared to:

- Gather early feedback
- Validate workflow fit for investors
- Explore co-ownership and integration partnerships

GainGo is especially interested in collaborating with:

- SEBI-registered brokerages

- Stock research and analytics platforms
- Financial news and education providers
